Wide Choice of Materials

WeldTec cable covers are available in two types of materials: glove-soft leather and soft woven nylon. Each type of material offers bundling and protection for the expensive torch cable and hoses.

Double Stitched Construction

Careful workmanship insures long life with double stitching of the closure. Cover ends are fused to resist fraying and ty-straps are provided to secure the cover to the torch handle.

Non-conductive Zipper or Velcro Closure

The full length closure allows installation of the cover without removing the torch from the welding machine. The non-conductive zipper will not conduct "HF" current and is protected from hot metal contact by the overlap flap construction. Velcro closure is not affected by burn or melt spots.

Standard Sizes

3" wide up to 3/4" diameter bundle and 4" wide up to 1 1/4" diameter bundle. Special sizes and lengths are available on special order.
