## Here are comments from actual users of WELDTEC's i-Head interchangeable head TIG torches.

J.B. Kannapolis, NC	"quality of torch over Weldcraft®"
J.H. Portland, OR	"thank you for making a great torch"
J.V. Columbus, OH	"a great torch"
J.K. Bakersfield, CA	"works grate"
P.C. Virginia Beach, VA	"very good TIG torch"
G.L. Suncook, NH	"lightweight, flexibility, interchangeability"
F.C. Chula Vista, CA	"quick + easy operation"
A.V. Hebron, IN	"braided hoses / lightweight"
H.L. San Diego, CA	"flex neck for body"
A.B. Greeley, CA	"ease of use – all positions"
J.G. Riverside, CA	"great products"
S.M. Vero Beach, FL	"adjustable head, great product"
C.T. Shelton, CT	"really cool torch"
J.M. Newburyport, MA	"adjustable angles"
M.B. Rice Lake, WI	"interchangeable heads an excellent idea"
J.O. Thornton, CO	"awesome"

What are they talking about ? . . . the unique features of WeldTec's **i-Head** interchangeable head TIG torches. There are three different torch series, 1) **flex neck** torch bodies, 2) swivel **ball joint** torches, 3) **rotating head** torches. The flex neck and ball joint models have 9 different style or angle heads that interchange and can be mounted on a common torch body. These unique torches allow the welder to change the torch configuration in minutes for access to difficult weld locations making the difficult jobs easier.

1. **FLEXIBLE NECK TORCH MODELS.** The flex neck models, air cooled and water cooled, allow the torch body to flex so the head can be positioned at various angles. Changing the head style can be done in minutes with the wrench provided.
2. **BALL JOINT MODELS.** These unique models feature a swivel ball joint in the neck of the torch body. Available as air cooled or water cooled, the ball joint allows the head to be repositioned at different angles and then locked in place with a twist of the torch body. The nine torch heads shared with the flex neck torches also mount on the ball joint torch body and can be changed in minutes.
3. **ROTO HEAD MODELS.** The roto head models, air cooled or water cooled, allow the torch head to rotate 380 degrees and be locked in position with a simple twist of the torch head. These unique angled torch bodies in combination with the swivel head gives unlimited angles and positions of the torch head. This handy torch will reach into almost any weld location.

These i-Head models are called problem solvers as they allow access to difficult weld locations. They are great for tube and pipe welding as well as sheet metal applications. They are not recommended for heavy work or thick aluminum materials.

Manufacturers of Quality Tungsten Inert Gas Welding Torches and Accessories - Since 1955
